

SYSTEMS ENGINEERING & INTEGRATION (SE&I)

Ingenicomm provides a comprehensive range of systems engineering and integration (SE&I) services to government customers to enable the realization of successful quality-based space and ground systems while maintaining a shared relationship between scope, schedule, and cost. Ingenicomm engineers, working hand in hand with our customers, engineer solutions to ensure ongoing operational success of some of the world's most complex products and systems. With a thorough understanding of each customer's mission and goals, we analyze requirements, develop and implement engineering solutions, test and validate results, and provide individualized support services to address specific customer needs.

Practical Engineering Experience

Ingenicomm's engineers apply practical engineering experience to guiding government customers through all phases of systems engineering, including requirements analysis, definition, and decomposition; system architecture, design, and implementation; integration and system deployment; system verification and validation; and transition to operations. Based on our experience and broad range of specific terrestrial and space mission experience, Ingenicomm provides robust systems engineering. Ingenicomm engineers apply knowledge of traditional and agile lifecycle frameworks providing our customers with the best-of-breed engineering support.

Cross-Domain Engineering

Ingenicomm provides cross-domain engineering and management services to our customers applying key systems engineering principles. Areas of hands-on experience include risk management; procurement management; quality assurance and process control; integration management; site survey analysis; and systems engineering milestone reviews.

Multi-Disciplinary SE&I

Ingenicomm uniquely adapts our SE&I framework to tailor and blend methodologies that are unique for each customer. Our multi-disciplinary and highly collaborative teams meet interdependency demands across design, manufacturing, and supportability processes. Our domain experts innovate across all SE&I disciplines, streamlining processes and seeking continuous improvement. With demonstrated success across a variety of demanding programs, the Ingenicomm SE&I approach exceeds cost and performance objectives from system concept through production. The result is continued mission success for our customers.

Ingenicomm, Inc. is a leading provider of ground and range equipment and enterprise engineering services for civil and commercial aerospace programs, as well as the defense and intelligence communities.
