INGENICOMM, INC.

Location: Chantilly, VA

Founded: 2010

Industry: Aerospace

AMIT PURI

President and CEO

Technology Implementer EMERGING

THE SOLUTION: Ingenicomm, Inc., provides enterprise management, engineering and implementation services, as well as ground systems and range electronics for aerospace programs in the civil, commercial, defense and intelligence sectors.

COMPETITIVE EDGE: Ingenicomm's ability to reduce program costs and risk through a single-system approach has been instrumental in its success in the highly competitive aerospace marketplace. A single system can support a mission's development and prototyping during the design and integration phases, transition to testing and certification activities once development is completed and deployed into live operations.

THE RESULT: For a company of its size, Ingenicomm has built a big footprint in terms of the sheer number of supported domestic and international missions. Ingenicomm equipment is used by every major space agency and deployed on every continent — even Antarctica. Ingenicomm has also captured significant market share in the defense and intelligence sectors, supporting the Air Force Satellite Control Network as well as programs like the space-based infrared system, the space-based surveillance system and the missile defense agency's NFIRE program.

AMIT PURI,
President and CEO,
Ingenicomm, Inc.

FUN FACT: Puri is an avid reader with shelves full of business books in his office. He believes there's a lot to be learned from other entrepreneurs' wisdom.
